

Software and Services that Optimize Performance

At P.E. Moseley & Associates (Moseley), we understand the ongoing and ever-changing challenges faced by oil and gas businesses. The combination of our software and related services delivers real solutions that can optimize your performance.

Software – We offer a suite of analytically rigorous software solutions to solve the most complex production and reservoir challenges, for wells, reservoirs or an entire field.

Training – We deliver public and custom, in-house training courses in both the use and engineering application of all Moseley software. At our Houston, Texas training center or in your company's facility, training is a sound investment for maximum productivity.

Mentoring – Following training, a Moseley associate can remain onsite to provide mentoring, which greatly enhances training productivity by providing additional support in the context of an engineer's job, projects and actual work environment.

Consulting – To provide specific expertise and guidance for your most complex problems, we deliver consulting services, which can be performed remotely or on site.

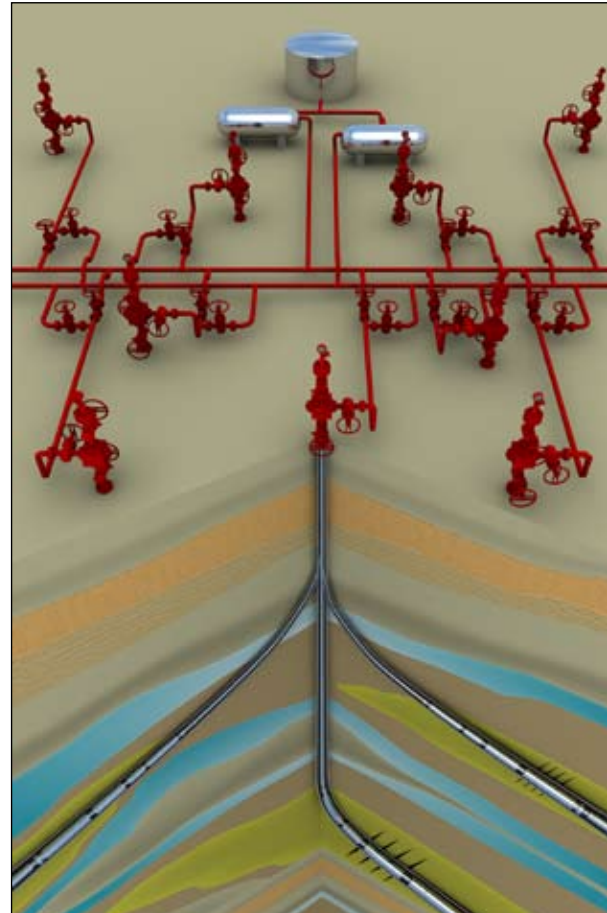

A Global Team of Associates Delivering Solutions to You – A global team of associates means we can deliver solutions to your business no matter where in the world you are located. Please contact our main office and we will connect you with the nearest associate.

Moseley Software

WEM (Well Evaluation Model) – Field-tested analytically rigorous well productivity software that improves performance throughout the full life cycle of a well, from design to abandonment.

NetSim – A powerful, integrated program that determines pipeline network capacity by balancing flow losses in the network with well deliverability.

DynaField (Dynamic Field Simulation) – A transient model used to develop production forecasts by time stepping through the life of a field. The system consists of any number of reservoirs and wells, and a surface network that collects and commingles production.

Not Just Clients, but Partners

At P.E. Moseley & Associates, our clients include national, major, and independent oil companies, service companies and consultants. Our clients tend to view us as a trusted advisor. And we view our clients as our trusted partners, for two main reasons.

First, we have long standing relationships with our clients, many of whom have been with us since the company began nearly 30 years ago.

Second, the nature of our work together is collaborative. As we join forces in consulting, training and mentoring, our clients share crucial knowledge and input, and we listen carefully.

Their input not only helps us to understand and help solve their current issue—it also helps us to enhance our products and services so that we continue to deliver solutions that meet the increasingly complex challenges of the industry.

Who We Are

Since our inception in 1982, P.E. Moseley & Associates has delivered innovative, analytically-rigorous, user-friendly software and solutions.

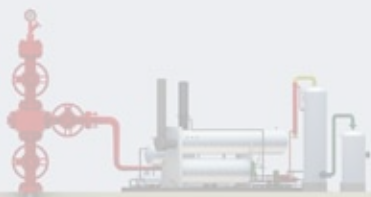

Virtually all software is developed and supported in-house by a Moseley team of advanced-degree experts and superior programmer talent. This elite team means our customers receive fast, accurate technical support and rapid response to their requests for new functionality.

Founder and president Dr. Phillip E. Moseley drives development, support, training and consulting. A team of Moseley associates executes the vision through continuous product enhancement and support, and delivery of services worldwide.

Today's Challenges for Oil and Gas Create an Urgent Need to Optimize Performance

Oil and gas has always been a complex business. But today's unique set of challenges combine to make it more complicated than ever, which means the need for optimum performance has never been greater.

Today's challenges include:

- ◆ Increased pressure for operators to maximize recovery and replace reserves in the face of dwindling production and still-strong worldwide energy demand forecasts.
- ◆ Dire need for fast, accurate evaluation of technological alternatives against production gains in the wake of recent global financial crisis and the unprecedented volatility in oil markets.
- ◆ Explosive growth in expenses, uncertainty and risk due to remote geographic locations and technically complex and unconventional plays.
- ◆ Urgent need for a newer, younger work force to be prepared and productive as quickly as possible as senior petrotechnical professionals retire in record numbers during the next few years.

Design ◆ Optimize ◆ Analyze

At P.E. Moseley & Associates, we understand that the right tools aren't always enough.

In this age of remote, round-the-clock operations; complex, high-risk plays and volatile markets, your engineers need the know-how to help them solve problems fast.

We provide the field-proven software and the training, mentoring and consulting services to bring your technical staff up-to-speed quickly and efficiently—optimizing performance for both your assets and your engineers.

To find out how we can help you optimize your performance, contact us today.
